DataOps.live delivers faster deployments with automation and orchestration of data products on Snowflake

Snowflake Partner of choice

Snowflake Ventures is a key DataOps.live investor, to jointly bring more value directly to all Snowflake customers:

"DataOps.live enables organizations to build, test and deploy Snowflake products and applications, the same way they do software applications. **DataOps.live increases speed of development and accelerates adoption, while maintaining governance and security**"

Stefan Williams
Head of Corporate Development,
Snowflake Ventures

Challenge

Business teams want to constantly move things forward, looking for more insights and value from their data—which means more demands on data engineers, and increased changes to data pipelines and platforms. Data teams should be able to make these changes in minutes rather than days and months.

To get value out of that data and cope with this speed and complexity, you need to access your data in minutes, manage it effectively, build the strongest data products, and have all the governance necessary.

Solution
The right data for the business with Snowflake and DataOps.live

It is now essential to move all your data from a multitude of data sources to a unique and centralized location—the Snowflake Data Cloud™—with all the performance, flexibility, and scalability you need to load, integrate, analyze, and share your data—securely.

Combining this with the DataOps.live platform will enable you to accelerate, automate, and orchestrate the Build, Test and Deployment of the Snowflake Data Cloud to drive and deliver more accurate business decisions.

Snowflake Automation and Orchestration

DataOps.live is a unique platform for Snowflake environment management, delivering end-to-end orchestration, Continuous Integration/Continuous Deployment (CI/CD), automated testing and observability, and code management, all wrapped in an elegant interface.

Take charge of your data while balancing agility and governance

Offering a unique combination of speed and agility, DataOps.live enables you to drive maximum value from your data, without sacrificing governance. It means faster development, parallel collaboration, developer productivity, data assurance, simplified orchestration, and more effective data product lifecycle management.

From vision to execution in weeks

> DataOps.live and Snowflake have gotten us from vision to production in weeks instead of months.
>
> Creating clarity and repeatability in this hugely dynamic context is their unique advantage!

David Bath
VP Digital products, OneWeb

Build, test, and deploy applications and data products on the Snowflake Data Cloud

About DataOps.live

DataOps.live—Built for the Data Cloud.

DataOps.live for Snowflake is a one stop platform for 100% of your DataOps lifecycle to enable agility and responsiveness, with no compromise on data security and governance.

It provides end to end orchestration, environment management, CICD, automated testing, and ELT wrapped in an elegant UI.

About Snowflake

Snowflake—Where your Data Cloud experience begins: one platform, many workloads, no data silos.

Snowflake enables every organization to mobilize their data with Snowflake's Data Cloud. Customers use the Data Cloud to unite siloed data, discover and securely share data, and execute diverse analytic workloads.
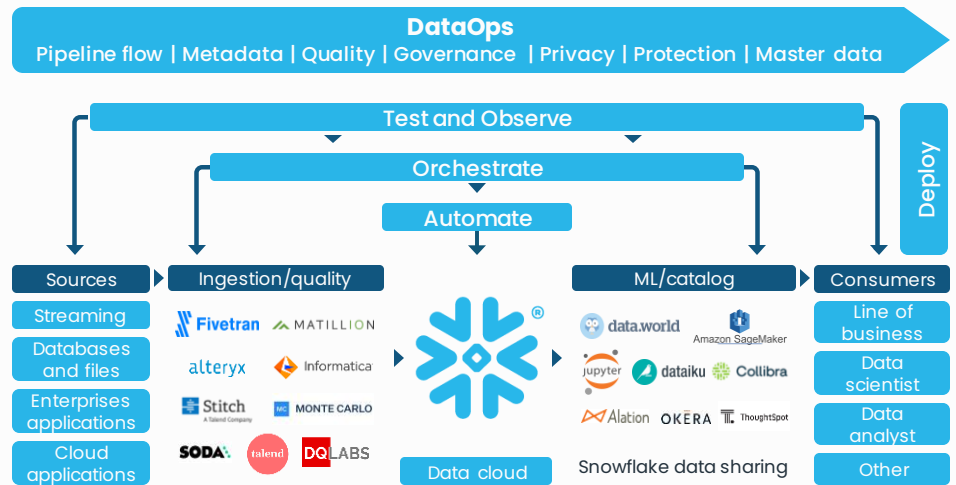

Wherever data or users live, Snowflake delivers a single data experience that spans multiple clouds and geographies.

Benefits and Value

Increased efficiencies
Fewer employees can deliver higher productivity in a short time scale.

Reduced costs
By shortening the time to production, businesses can reduce costs by a minimum of 30%.

Simplified orchestration and management
DataOps transcends vendor-specific limitations, enabling orchestration of heterogeneous data environment.

Faster development
Gain access to the valuable insights in a day rather than a month.

Data Assurance
Provide assurances and guarantees on data your business stakeholders can rely.

Parallel development
Using DataOps, teams deliver changes in parallel—zero conflict—with faster delivery to business.
